**Transfer record production system for use in financial institution,
produces external data *table* by grouping data *extracted* from personal
information *database* and *account* *information* *database***

Abstract (Basic):

... preparation unit (101) produces an external data table (92) by
grouping the data from an *account* *information* *database* (95) and a
personal information *database* (90). An information shunting unit
(106) generates record shunting information (93) by *extracting*
necessary data from external data *table*. Transfer record (94) is
produced, based on the recorded shunting information.
... personal information *database* (90)...

...account information *database* (95)...

...Title Terms: *DATABASE*;

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
KR 2002070605	A		1	G06F-017/60	

Abstract (Basic):

... account of the buyer, and stores the calculated basic point to a
balance of an *account* *information* *table* of an account *DB*(207).
The service server generates an account structure of a tree structure
having one node or more in the account *DB*, generates a new node,
provides the generated node number to the account, and stores the node
number to a node of the *account* *information* *table*(208). The
service server calculates a point provided or accumulated in the
account(209). If...

...service server reads goods capable of being bought using the total point from a goods *DB* and provides the *read* goods to the buyer so that the buyer selects the goods(214...

ABSTRACT

... SOLUTION: In order to separate a transaction message to a message buffer, one or plural *transaction* *journal* *logs* written in a specified binary format and stored in one or plural financial institution application *data* *bases* are *read*. Message contents are analyzed and written out to the *flat* *text* *file* of a *structured* *query* language(*SQL*) record of an output file capable of loading to a *data* *base* while recycling at least one Visual Basic(R) (VB) class used for preparing the *transaction* *journal* *log*. The output file is stored in a relational *data* *base* managing system, for example, and can be used for generating the reports of various types...

ABSTRACT

... of journalizing information handled as funds and other journal information within a computer.

SOLUTION: The *account* *information* processor is equipped with a *database* 4 having a fund and journalizing correspondence *table*, where fund codes to be given to at least one of the debit and credit...

... codes given by the kinds are defined corresponding to journalizing patterns and a slip information *table* for rearranging slip information given fund codes for journalizing for recognition as funds, a fund...

...or credit when the recognized journal pattern is present in the fund and journalizing correspondence *table*, a journalizing information *extraction* part 7 which *extracts* the journalizing information given the fund code from the slip information *table*, and a *table* calculation part 8 which performs *table* calculations of reception and payment by the fund codes, corresponding to a cash flow *table* from the journalizing information and generates a cash flow *table* of an object period.

ABSTRACT

... Based on format specified in the four types of the tables of a log reader *table* 11, a log division *table* 14, a log stack *table* 12 and a *data* *base* updating *table* 19, *transaction* *log* information is *read* from a *transaction* *log* file 13, divided to files 15 for every transaction and stored in a *data* *base* 20. Accordingly, the collecting processing of the *transaction* *log* is executed through the *table* system constituted independently of a transaction form, so that it is not required to prepare...
